PERFORMANCE SETUP

DJ Sulli is excited to perform and is comfortable working within a professional club environment. The configuration below represents the preferred setup for current DJ Sulli performances. Comparable professional Pioneer/AlphaTheta equipment is welcome, with reasonable flexibility based on the installed venue system.

PREFERRED BACKLINE

- 4 x Pioneer CDJ-3000
- 1 x Pioneer DJM-A9 mixer
- 1 x Pioneer RMX-1000

All CDJ players linked via Pro DJ Link.
Professional stereo booth monitoring.

ALTERNATIVE CONFIGURATIONS

Comparable professional Pioneer/AlphaTheta club-standard equipment is absolutely workable. Three or four linked media players are preferred when available. The RMX-1000 is preferred, but not essential.

If the installed equipment differs significantly from the preferred configuration, an equipment list in advance is appreciated so the artist can prepare accordingly.

BOOTH & SYSTEM

All equipment, network connections, audio routing and booth monitoring should be fully functional, properly connected and tested prior to performance. The DJ booth should provide a stable professional working environment with adequate monitoring and sufficient space for the installed equipment.
